

# Top 50 Flutter Interview Questions - Page 1

## 1. What is Flutter?

Flutter is an open-source UI software development kit created by Google. It is used to develop cross-platform applications for Android, iOS, Linux, macOS, Windows, Google Fuchsia, and the web from a single codebase.

## 2. What is Dart?

Dart is an object-oriented, class-based, garbage-collected language with C-style syntax. Flutter uses Dart to build its apps.

## 3. What are Widgets in Flutter?

In Flutter, everything is a widget. Widgets are the basic building blocks of a Flutter app's user interface.

## 4. What is the difference between Stateless and Stateful widgets?

A Stateless widget never changes its state. A Stateful widget can change its state during the runtime of the application.

## 5. What is the pubspec.yaml file?

The pubspec.yaml file is used to define the dependencies, assets, and other configurations for a Flutter project.

## 6. What is Hot Reload?

Hot Reload allows you to inject updated source code files into the running Dart Virtual Machine (VM). This enables you to see the changes you make to the UI almost instantly without losing the state.

## Top 50 Flutter Interview Questions - Page 2

### 1. What is Flutter?

Flutter is an open-source UI software development kit created by Google. It is used to develop cross-platform applications for Android, iOS, Linux, macOS, Windows, Google Fuchsia, and the web from a single codebase.

### 2. What is Dart?

Dart is an object-oriented, class-based, garbage-collected language with C-style syntax. Flutter uses Dart to build its apps.

### 3. What are Widgets in Flutter?

In Flutter, everything is a widget. Widgets are the basic building blocks of a Flutter app's user interface.

### 4. What is the difference between Stateless and Stateful widgets?

A Stateless widget never changes its state. A Stateful widget can change its state during the runtime of the application.

### 5. What is the pubspec.yaml file?

The pubspec.yaml file is used to define the dependencies, assets, and other configurations for a Flutter project.

### 6. What is Hot Reload?

Hot Reload allows you to inject updated source code files into the running Dart Virtual Machine (VM). This enables you to see the changes you make to the UI almost instantly without losing the state.
